Established on April 7, 1948, the WHO has been at the forefront of promoting health and safety worldwide. Headquartered in Geneva, Switzerland, it operates through six regional offices and 150 field offices across the globe.

The WHO was formed by incorporating the assets, personnel, and duties of the League of Nations' Health Organization and the Paris-based Office International d'Hygiène Publique. This merger brought together valuable resources, including the International Classification of Diseases (ICD), which has been instrumental in tracking and addressing global <u>health</u> issues.

Since its inception, the WHO has been actively working towards its official mandate of promoting <u>health</u> and safety while assisting vulnerable populations. It provides technical

assistance to countries, sets international <u>health</u> standards, collects data on global health issues, and serves as a platform for scientific and policy discussions related to health.

One of the key publications by the WHO is the World Health Report, which provides comprehensive assessments of worldwide health topics. This <u>report plays a crucial</u> role in informing policymakers and healthcare professionals about the current state of global health and guiding them in making informed decisions.

The WHO has achieved <u>significant milestones in public health</u>, including the eradication of smallpox, near-eradication of polio, and the development of an Ebola vaccine. These successes highlight the organization's <u>commitment to tackling</u> <u>communicable diseases and protecting</u> communities from outbreaks.
